Chapter 30
Organization

RMA Multi-Agency Coordinating (MAC) Group
Rocky Mountain Area Multi-Agency Coordinating (MAC) Groups should be activated
at the local and Geographic Area levels whenever wildland fire activities are affecting
more than one agency or there is competition for incident resources. There may also be
a need for the Geographic Areas to activate MAC when the Fire Preparedness Level is
at 4 or 5. Responsibilities of MAC Groups at all levels include the following: Refer to
the RMA MAC Plan located at:
http://gacc.nifc.gov/rmcc/administrative/mac_group.html

Needs of MAC Groups
Local area MAC Groups should be developed to provide greater efficiency to fire suppression
organizations while relieving coordination centers and dispatch centers of heavy workloads
during active situations. Care should be taken to ensure that local MAC Groups do not become
involved in incident operations but restrict their activities to support functions.

Delegated Authority
These individuals have delegated authority from their respective agency administrator
to reallocate critical resources when necessary and to perform the same functions as
national level MAC (NMAC). Refer to the RMA MAC Plan for further information.
